

Why Manual Processes Don't Scale

ChronicCareIQ By The Numbers

\$346M+

Reimbursements generated for
care management activities

Year-over-year
patient retention

376,565+

Patients enrolled

Reduction in
all-cause hospitalizations

3,229,292

Hours of staff activities
documented for billing

The Hidden Complexity of CCM

Monthly outreach:
at least 10 minutes of
non-face-to-face care

**Time tracking and
documentation:** every
minute must be logged

Care plan updates:
reflecting new diagnoses,
medications, and goals

**Follow-up and symptom
monitoring:** especially for
high-risk patients

**When you multiply these
processes and requirements by
100+ patients per provider, the
workload becomes impossible to
scale without automation.**

Kristy Townsend

Better Weighs to Better Health

"CCIQ is such an integral part of our success. We could not have taken on the number of patients that we have without CCIQ. It takes multiple tasks off of the entire clinical team on a daily basis. This gives providers more time to perform sick visits, review labs and diagnostics, perform peer-to-peer reviews, or to chart."

The Benefits Of Care Automation
